

A 300

AquaMagic™

FILTER SYSTEMS

EMERGENCY FILTER FOR WATER HEATERS

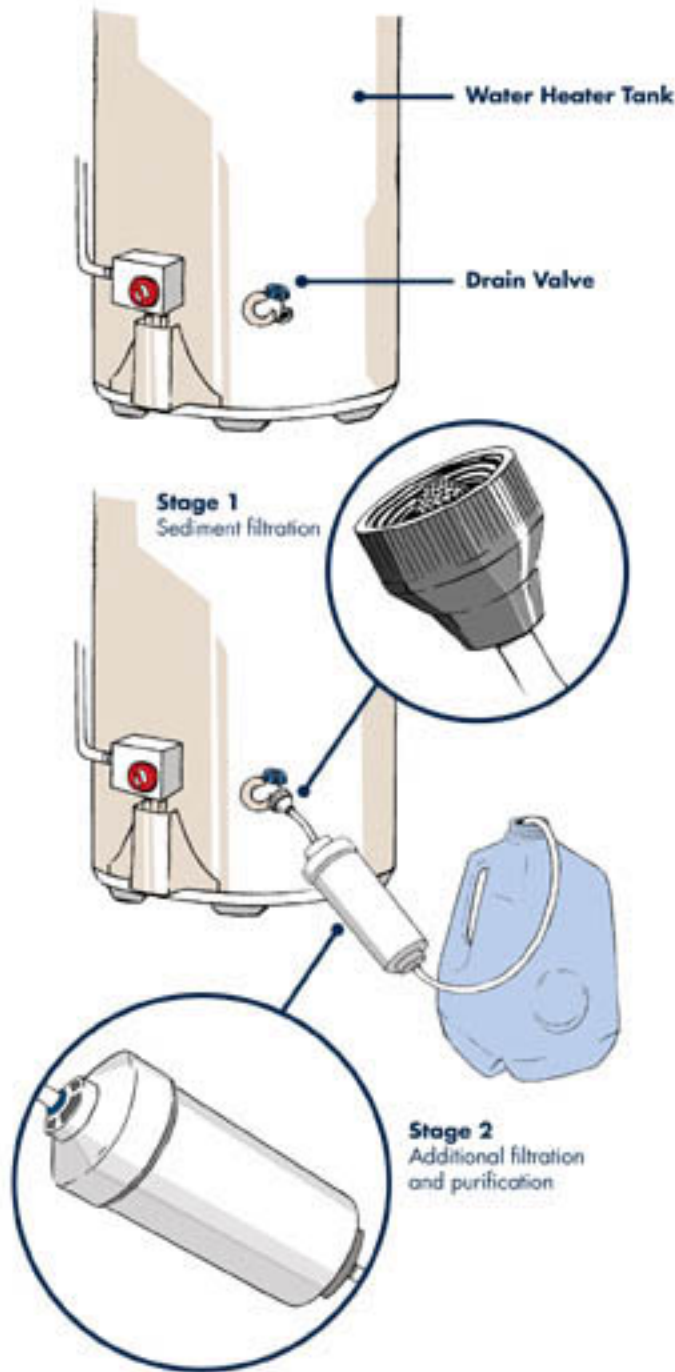

When tap water is knocked out and bottled water is sold out, where are you going to get water? You'll need more than magic—you'll need AquaMagic. Normally, water discharged from a water heater is unsafe because dispensing it from the drain valve mixes in the harmful sediment at the bottom of the tank into the pure water above. AquaMagic's powerful and simple solution is the A300 Emergency Filter for water heaters™ which screens out sediment, rust and dirt, then filters the water for purity and taste. It connects to your water heater in seconds. It's the no worries™ water storage product that has no shelf life issues, no chemicals, no space requirements, no set up, and no maintenance! Be prepared for the next disaster by getting your A300 today.

Connects in seconds

Filters up to 300 gallons

For use in one incident

AquaFlash™ technology
Patent-pending

AquaMagic
drink fresh

A-300 Features

Safety approvals: NSF

Filter Media:

AquaFlash technology including natural coconut-based activated carbon for the elimination or reduction of inorganic contaminants and impurities that can cause undesirable taste, odor and color in drinking water.

Universal Fit:

Filter uses a 3/4" female hose thread that fits all household water heaters.

Environmentally Safe:

Uses no chemicals, water is filtered with natural materials.

Service Life/Volume:

Rated to filter up to 300 gallons before replacement.

Useful Life:

During an emergency or daily use, 30 days.

Installation Time:

Several seconds...comparable to connecting a garden hose to a faucet.

Length:

24 inches, sufficient length to fill a tall pitcher or typical 5 gallon container. Coils up to fit in your hand.

Disaster-Ready:

Requires no power, water pressure or pumping.

Shelf Life:

Indefinite, if left in sealed packaging. Opened and unused shelf life is 10 years.

Storage:

Store the Emergency Filter near your hot water heater.

Discard after use
